General information

Key to terms

In this service manual, the terms CAUTION, NB: and NOTE: are used as follows:

CAUTION

The term CAUTION signifies that incorrect procedures can cause personal injury.

NB:

The term NB: signifies that incorrect procedures can cause material damage.

NOTE:

The term NOTE: highlights important user instructions.

The service manual describes the repair and inspection operations that can be performed on tiltrotator/rotator EC05.

The safety regulations apply regardless of which base machine is used.

Also see the safety instructions for the base machine and other equipment used.

Also see the safety information in the instruction manual.

Make sure you have read and understood all the cautions before undertaking any maintenance operations. The cautions explain potential risks and how to avoid them.

If in any doubt, contact your employer or the supplier. Expert advice can eliminate many unnecessary risks.

Cautions

CAUTION

Incorrect installation can pose a safety risk. If in any doubt, contact an engcon dealer or engcon Nordic AB.

CAUTION

Make sure that the hydraulic system is free of pressure before starting work on the system. Risk of personal injury.
CAUTION
Switch off the power when working with the electrical system and remove rings, watches etc. before starting work. Risk of personal injury.

CAUTION
Never use your hands to check for leaks in the hydraulic system. Hydraulic oil under pressure can penetrate your skin causing serious injury.

CAUTION
Implements connected to the tiltrotator/rotator may not be used under any circumstances unless correctly locked into place. ALWAYS make sure that the lock bolts protrude according to the specifications for the relevant quick hitch.

CAUTION
Never attempt to upgrade the equipment’s maximum capacity by making modifications without the supplier’s approval.

CAUTION
Short circuits in electrical cables can cause injury and burning. Insulate electrical conductors and parts carefully when installing electrical equipment.

CAUTION
Risk of burn injuries from hot hydraulic oil.

CAUTION
The machine must never be operated with the implement lock switch turned on, except when attaching or detaching a bucket or implement.

CAUTION
If in any doubt regarding the machinery or the safety features, contact an engcon dealer or engcon Nordic AB.

CAUTION
Risk of catching in moving parts.
